

Swiss Construction Site Electrical Distribution Box Dimensions and Specifications

Overview

With a nominal voltage of 400 V and a nominal current of 32 A, this distribution box offers a robust and safe way to operate multiple electrical devices simultaneously. Distribution cabinets are designed purely for the distribution of electricity on the construction site. They are equipped with connection fuses as NH fuse switch-disconnectors with sockets up to 125 A and terminal outlets. Aware of your challenges for more efficient operations, our technical teams design electrical cabinets perfectly sized to your needs with the aim of optimizing every kilowatt. Indeed, it was the first time that Alps Equipment had produced such a large volume of cells for Siemens. The panels are made in a sturdy and handy two-component technopolymer cabinet with a fire-resistant backrest, which allows them to be stored and reused in. The equipment used must be brand new, free from all visible or hidden defects, and conforming to EC standards, particularly those governing protection against electromagnetic interference and the emission of electromagnetic interference. A maximum of eight high-current outlets per circuit must be.
