

Taiping Communication Integrated Power Supply Settings

Article Overview

Configure your Taiping power supply by selecting the communication interface, setting the device address, and adjusting memory parameters for remote control and monitoring.

Communication Interface Configuration

The power supply can be configured for RS-232, RS-485, USB, or LAN communication depending on your system requirements . To set the interface:

- Press the REM button; the REM LED will illuminate.
- The display shows “Intf” indicating interface selection mode.
- Use the Current encoder to scroll through available interfaces.
- Press the encoder to save the selected interface; the display will blink once to confirm . Important: Do not connect or disconnect the USB cable while the power supply is operating to avoid communication errors .

Address Setting

Each power supply must have a unique address (1-31) for networked operation:

- Press the REM button; the REM LED illuminates.
- The display shows “adr” on the current display.
- Rotate the Current encoder to select the desired address.
- Press the encoder to store the address; the display blinks once to confirm
