

The router's fiber optic cable is too tight to unplug

Article Overview

Always handle fiber optic cables gently, gripping the connector body and pulling straight out to avoid damage.

Step-by-Step Guidance

Power Down Equipment: Before attempting to unplug the cable, turn off your router or modem to minimize any risk of data loss or electrical interference, even though fiber itself does not carry electricity . **Identify the Connector Type:** Common residential connectors include SC (square, push-pull), LC (smaller, clip or latch), ST, and FC. Knowing the type helps you understand the release mechanism and avoid applying excessive force . **Grip the Connector, Not the Cable:** Always hold the plastic connector body firmly. Pulling on the cable itself can stress or break the delicate glass fibers inside . **Pull Straight and Gently:** Apply steady, straight pressure along the axis of the connector. Avoid twisting, wiggling, or bending the cable sharply, as this can crack the fiber or damage the port . **Release Locking Mechanisms:** If the connector has a latch or tab (common in LC or SC/APC connectors), depress or squeeze it fully before pulling. For stubborn connectors, ensure the tab is fully disengaged before applying more force . **Use Proper Lighting and Tools:** A flashlight can help you see the connector clearly. Tweezers or small pliers may assist in gently maneuvering the connector if it is recessed, but avoid gripping the fiber itself . **Stop if Resistance Persists:** If the cable does not come out easily, do not force it. Forcing can cause permanent damage. Contact your ISP or a certified technician for assistance . **Cap Exposed Connectors:** Once removed, immediately place protective caps on bot...
