

Tray-type cable tray models

Article Overview

Tray-type cable trays, also known as solid or ventilated trays, provide continuous support for cables and are available in various materials and CAD formats for design integration.

Overview of Tray-Type Cable Trays

Tray-type cable trays are designed to support and organize electrical cables in industrial and commercial installations. Unlike ladder trays, which have open rungs, tray-type models provide a continuous bottom surface that fully supports cables, making them ideal for sensitive or smaller cables that require uniform support . They are commonly used for power, control, instrumentation, and communication cables.

Types of Tray-Type Cable Trays

- Solid Bottom Trays
 - Feature a completely solid base for maximum cable support.
 - Protect cables from dust, debris, and environmental exposure.
 - Suitable for installations where cable protection is critical .
- Perforated or Ventilated Trays
 - Have a solid base with regularly spaced holes for ventilation.
 - Allow airflow to dissipate heat from power cables while still providing continuous support.
 - Offer a balance between cable protection and thermal management .
- Channel Trays...
