

Tunnel-type cable trays

Article Overview

Tunnel cable trays come in several types, including ladder, perforated, wire mesh, solid-bottom, and GRP trays, each designed to meet specific load, ventilation, and safety requirements.

Ladder Cable Trays

Ladder trays consist of two side rails connected by rungs, forming an open structure that allows excellent ventilation and heat dissipation. They are ideal for large power routes, main distribution cables, and long utility corridors in tunnels, supporting heavy loads and enabling easy inspection and cable pulling (). Their modular design allows them to navigate bends, inclines, and drops without major tunnel modifications ().

Perforated Cable Trays

Perforated trays have a solid bottom with regularly spaced holes, providing continuous cable support while allowing limited airflow. They are suitable for lighting circuits, control cables, and auxiliary systems where a more enclosed appearance is preferred (). These trays balance support and ventilation, making them versatile for medium-load applications.

Wire Mesh (Basket) Trays

Wire mesh trays, also called basket trays, are lightweight and flexible, ideal for low-voltage, communication, or fiber optic cables in accessible service areas (). Their o...
