

Types of Optical Power Splitters

Overview

According to the principle, fiber optic splitters can be divided into Fused Biconical Taper (FBT) splitter and Planar Lightwave Circuit (PLC) splitters. The FBT splitter is one of the most common. It can distribute the optical energy transmitted through a single fiber to two or more fibers in a predetermined ratio or combine the optical energy from multiple fibers into one fiber. Its primary role is in Passive Optical Networks. In the backbone of modern Fiber-to-the-Home (FTTH) networks, optical splitters serve as the unsung heroes that enable cost-efficient connectivity for millions of subscribers. In this guide, you'll learn: What an optical splitter is and how it works PLC splitter vs FBT splitter. Whether you're a network engineer designing a PON (Passive Optical Network) or a homeowner curious about how your fiber connection works, understanding splitters is essential for grasping the backbone of modern connectivity.
