

Types of electrical distribution boxes in Monaco

Article Overview

Electrical distribution in Monaco typically involves a combination of main distribution boards, sub-distribution boards, meter panels, consumer units, and specialized panels to ensure safe and efficient power management.

Main Distribution Board (MDB)

The MDB serves as the central hub for electricity entering a building or facility. It distributes power to various sections, manages load, and protects against overloading. Components typically include a freestanding enclosure, bus bars, MCCBs (Molded Case Circuit Breakers), and support equipment. MDBs are essential in both residential complexes and commercial buildings in Monaco for centralized control and safety.

Sub-Distribution Board (SDB)

SDBs branch off from the MDB to supply electricity to specific areas such as floors, garages, or parking lots. They reduce long cable runs, improve efficiency, and allow localized control of circuits. SDBs are commonly used in multi-story residential buildings, offices, and industrial facilities.

Meter Panels

Meter panels house electricity meters and provide a point for monitoring consumpti...
