

Venezuela ADSS Optical Cable 6 Cores

Article Overview

A 6-core ADSS (All-Dielectric Self-Supporting) cable is a lightweight, non-metallic fiber optic solution designed for aerial deployment, offering high durability, EMI immunity, and suitability for high-voltage environments.

Key Features

- **Fiber Composition:** Contains six single-mode or multimode optical fibers arranged in protective buffer tubes, suitable for high-speed data transmission .
- **Strength Members:** Reinforced with high-tensile aramid yarns (e.g., Kevlar) to withstand mechanical stress and tension during installation .
- **Outer Sheath:** Dual-layer polyethylene (PE) or anti-tracking (AT) sheath provides resistance to UV radiation, moisture, and electrical arcing, making it ideal for installation near power lines .
- **Dielectric Construction:** Fully non-metallic design eliminates electromagnetic interference (EMI), allowing safe co-installation with high-voltage power infrastructure .
- **Self-Supporting:** Engineered for aerial deployment without messenger wires or metallic support, reducing installation complexity and cost .
- **Durability:** Operates reliably in extreme temperatures (-40°C to +70°C) and resists corrosion, rodent damage, and chemical exposure .

Applications

- **Telecommunications:** Localized networks, rural broadband, and redundant links in industrial campuses
