

Venezuelan Flat Steel Cable Tray Specifications

Article Overview

Venezuelan flat steel cable trays are manufactured from high-quality steel sheets, available in multiple thicknesses and finishes, and comply with both local and international standards.

Material and Construction

Venezuelan flat steel cable trays, such as those produced by Cabletray® in Caracas, are made from steel sheets designed for durability and structural integrity. They are available in pre-galvanized, hot-dip galvanized, stainless steel, and aluminum options, depending on environmental and corrosion resistance requirements. The steel used typically conforms to BS EN 10130, BS EN 10131, and BS EN 10051 standards, ensuring consistent mechanical properties and quality.

Thickness and Dimensions

Flat steel cable trays are offered in a range of sheet thicknesses to accommodate different load capacities and installation needs. Common thicknesses include 1.0 mm, 1.2 mm, 1.5 mm, and 2.0 mm. Tray widths and lengths are customizable, with standard widths designed to support typical cable bundles while maintaining proper spacing and bend radius.
