

View the switch s access IP

Article Overview

The access IP of a switch is typically the IP assigned to its management interface, which can be viewed using CLI commands, DHCP server logs, or network scanning tools.

Using the Command-Line Interface (CLI)

For Cisco switches and similar devices, the most direct method is via the CLI:

- Connect to the switch using a console cable, Telnet, or SSH.
- Enter privileged EXEC mode by typing enable.
- Use the command `show ip interface brief` to display all interfaces along with their IP addresses, status, and protocol. The management IP is usually assigned to VLAN 1 by default .

Checking DHCP Server or Router

If the switch obtains its IP via DHCP:

- Log into your router or DHCP server.
- Navigate to the DHCP client list or attached devices section.
- Look for the switch by hostname or model number to find its assigned IP .

Using Network Scanning Tools

Network scanning tools can help discover the switch IP on your network:...
