

Waterproof Distribution Box with Sealing Strip

Article Overview

Waterproof sealing strips protect distribution boxes from moisture, dust, and environmental damage, ensuring electrical safety and durability.

Types and Materials

Rubber U-shaped strips are commonly used for distribution boxes. They are flexible, elastic, and can closely fit the edges of boxes to prevent water and dust ingress, forming a strong protective barrier . Silicone and rubber gaskets are also widely used due to their excellent heat resistance, elasticity, and long-term durability . Other materials include flexible PVC for chemical resistance and ethylene resin for insulation and low friction . Some strips combine sponge and hard rubber for dual protection, offering both cushioning and waterproofing .

Design Considerations

- Shape: U-shaped strips wrap around edges, while flat or corrugated strips can be inserted into panel grooves .
- Thickness and Size: Strips come in various thicknesses (2-6 mm) and lengths (e.g., 1000 mm), allowing adaptation to shallow or deep panel doors .
- Elasticity: High elasticity ensures a tight seal even on uneven surfaces .
- Weather Resistance: Materials are often flame-retardant, ozone-resistant, and durable under extreme temperatures
