

What are the types of power distribution cabinets in Austria

Article Overview

Power distribution cabinets in Austria include low-voltage, medium-voltage, indoor, outdoor, wall-mounted, and floor-standing types, designed to meet various industrial, commercial, and public infrastructure needs.

Main Types of Distribution Cabinets

1. Low-Voltage Cabinets These cabinets handle voltages typically below 1 kV and are used in residential, commercial, and light industrial applications. They often include circuit breakers, relays, busbars, and monitoring devices, and can be installed indoors or outdoors depending on the enclosure rating (IP34D to IP54) . 2. Medium-Voltage Cabinets Designed for voltages above 1 kV, medium-voltage cabinets are used in industrial plants, substations, and large commercial facilities. They provide safe distribution and control of higher power levels and often include load-break switches and protective relays . 3. Indoor Cabinets Indoor cabinets are typically installed in controlled environments such as server rooms, industrial halls, or commercial buildings. They can be wall-mounted or floor-standing and are often modular to allow easy expansion or maintenance . 4. Outdoor Cabinets Outdoor cabinets are built to withstand environmental conditions and comply with higher IP ratings (IP43/IP44 up to IP54). They are commonly used for street lighting, public infrastructure, and outdoor industrial applications. Some designs integrate advertising space or other multifunctional features . 5. Wall-Mounted Cabinets These compact cabinets are mounted on walls and are suitable for limited space applications. They are often used for small distribution points, control panels, or energy monitoring systems . 6. Floor-...
