

What does 144-core optical distribution box mean

Article Overview

A 144-core optical distribution box is a high-capacity fiber management unit designed for splicing, distribution, and protection of up to 144 fiber optic cores, suitable for both indoor and outdoor installations.

Overview

A 144-core optical distribution box (ODF/ODCC) is engineered to manage large-scale fiber optic networks efficiently. It serves as a central point for connecting backbone cables to distribution cables, enabling both direct connections and cross-connections. These boxes are widely used in FTTH (Fiber to the Home) networks, outdoor trunk interfaces, and indoor fiber management applications .

Key Features

- **High Capacity:** Supports up to 144 fiber cores, accommodating extensive network deployments .
- **Durable Construction:** Typically made from metal (cold-rolled steel or stainless steel) or rust-proof materials, providing resistance to environmental factors and mechanical stress .
- **Weatherproof and Dustproof:** Many models feature IP68-rated sealing, ensuring protection against moisture, dust, and extreme weather conditions, making them suitable for outdoor use .
- **Splicing and Distribution:** Integrated splice trays or modules allow for fusion splici...
