

What network security devices have you used

Article Overview

Common network security devices include firewalls, intrusion detection and prevention systems, VPN gateways, unified threat management appliances, network access control systems, and web application firewalls.

Firewalls

Firewalls are fundamental network security devices that monitor and control incoming and outgoing traffic based on predefined rules. They can be hardware-based, software-based, or a combination, and include types such as packet-filtering firewalls, stateful inspection firewalls, and next-generation firewalls (NGFWs), which offer deep packet inspection, intrusion prevention, and application awareness .

Intrusion Detection and Prevention Systems (IDS/IPS)

IDS devices monitor network traffic for suspicious activity and alert administrators, while IPS devices actively block malicious traffic in real time. These systems can be network-based (NIDS) or host-based (HIDS), providing protection against known attack signatures and anomalous behavior .

VPN Gateways

VPN gateways create secure tunnels for remote access, encrypting traffic between distributed teams and the corporate network. They are essential for remote work an...
