

What size router should I buy for a 200 Mbps fiber optic connection

Article Overview

For a 200 Mbps fiber connection, a router supporting at least 1 Gbps speeds with Wi-Fi 5 or 6 is recommended to fully utilize your bandwidth.

Key Specifications to Consider

Speed: Even though your fiber plan is 200 Mbps, it's best to choose a router rated for 1 Gbps or higher to ensure smooth performance and future-proofing . Routers like the NETGEAR Nighthawk RAX200 (up to 2300 Mbps) or ASUS RT-AX5700 (up to 3100 Mbps) are more than sufficient for a 200 Mbps connection . **Wireless Standard:** Look for Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax) routers. Wi-Fi 6 offers better efficiency, lower latency, and improved performance with multiple devices . Wi-Fi 7 is emerging but not necessary for a 200 Mbps plan. **Coverage and Range:** Choose a router that matches your home size. Dual-band routers are usually sufficient for most homes, while tri-band or mesh systems are ideal for larger spaces or multiple floors . **LAN Ports:** If you plan to connect wired devices, ensure the router has at least 4 Gigabit Ethernet ports. Some routers also support LAN aggregation for higher combined speeds . **Additional Features:** Advanced QoS (Quality of Service) can prioritize bandwidth for gaming or streaming. Security features like WPA3, VPN support, and built-in cybersecurity software (e.g., NETGEAR Armor) are beneficial .
