

What size router should I use with a 300m fiber optic connection

Article Overview

For a 300 Mbps fiber optic connection, a dual-band Wi-Fi 5 or Wi-Fi 6 router with speeds of at least 600–1,200 Mbps is sufficient to fully utilize your connection.

Key Considerations

Speed and Standards: Even though your fiber plan is 300 Mbps, it's recommended to choose a router that supports higher speeds (600–1,200 Mbps) to ensure stable performance and future-proofing. Wi-Fi 5 (802.11ac) is adequate, but Wi-Fi 6 (802.11ax) offers better efficiency, lower latency, and improved performance with multiple devices . **Frequency Bands:** Dual-band routers (2.4 GHz and 5 GHz) are ideal for balancing coverage and speed. The 2.4 GHz band provides longer range, while the 5 GHz band delivers faster speeds for streaming, gaming, or video calls . Tri-band routers are optional unless you have many high-demand devices. **Coverage Area:** Consider your home size. For small to medium homes, a single high-performance router is sufficient. For larger homes or multi-story buildings, a mesh system or additional access points may be needed to avoid dead zones . **Wired Connections:** Ensure the router has at least one gigabit Ethernet WAN port to connect to your fiber modem and multiple LAN ports for wired devices. This prevents bottlenecks and maximizes speed for devices like gaming PCs or smart TVs . **Recommended Models:**

- TP-Link Archer A7: Dual-band, up to 1,750 Mbps, budget-friendly, reliable for 300 Mbps fiber .
- NETGEAR Nighthawk R6700: Dual-band, up to 1,750 Mbps, good coverage and sta...
