

What to do if the fiber optic cable in the computer room is stuck

Article Overview

If a fiber optic cable is stuck, carefully inspect, gently manipulate, and use proper tools to avoid damage, escalating to a professional if necessary.

Immediate Steps

- **Power Down or Isolate the Link:** Before attempting to free the cable, ensure the connected devices are powered down or the link is inactive to prevent signal loss or equipment damage .
- **Visual Inspection:** Examine the cable for visible kinks, tight bends, or obstructions along its path. Check connectors and ports for dust, debris, or misalignment .
- **Gentle Manipulation:** If the cable is physically stuck, avoid pulling forcefully. Slowly and carefully try to free it, following the cable's natural routing and respecting the minimum bend radius to prevent fiber breakage .
- **Connector Cleaning:** Contamination on connectors can make cables feel stuck. Use a fiber optic cleaning pen, lint-free wipes, or cassette cleaners to clean the ferrule end faces before reseating the cable
