

# What to do if the fiber optic cable is disconnected

## Article Overview

If a fiber optic cable disconnects, start by inspecting physical connections, cleaning connectors, testing signal strength, and, if necessary, repairing or replacing damaged sections.

### Initial Troubleshooting Steps

- **Check Power and Equipment:** Ensure the Optical Network Terminal (ONT), switches, and routers are powered on and functioning properly. Restarting these devices can resolve temporary connectivity issues .
- **Inspect Cables and Connectors:** Look for visible damage, sharp bends, or loose connectors. Even minor bends or kinks can cause signal loss .
- **Clean Connectors:** Dust, oil, or fingerprints on connector ferrules are a common cause of disconnection. Use lint-free wipes, alcohol, or specialized fiber cleaning tools to clean the connectors before reconnecting .

### Diagnostic Testing

- **Test Signal Strength:** Use an optical power meter or OTDR (Optical Time Domain Reflectometer) to measure signal loss and locate breaks or weak points in the fiber .
- **Check Transceivers:** Swap suspect transceivers with known-good units to rule out hardware failure. Look for “LOS” (Loss of Signal) indicators on transceivers, which signal connectivity issues .

### Repairing the Fiber

- **Locate the Break:** Use an OTDR to pinpoint the exact location of the disconnection...
