

What type of electrical distribution box is used for equipment in Burkina Faso

Article Overview

For equipment in Burkina Faso, three-phase Main Distribution Boards (MDBs) and Sub Distribution Boards (SDBs) are commonly used, with configurations depending on load and installation type.

Types of Distribution Boxes

Main Distribution Board (MDB): The MDB is the central hub for electrical power distribution. It receives electricity from the utility supply and distributes it to sub-distribution boards or directly to high-demand equipment. MDBs are essential for industrial facilities, large commercial buildings, and multi-floor installations. They typically include MCCBs, busbars, RCDs, and main switches to protect circuits from overloads and short circuits .

Sub Distribution Board (SDB): SDBs are smaller panels connected to the MDB, distributing power to specific areas or equipment. They are commonly used in residential complexes, offices, or industrial sections to simplify maintenance and isolate circuits without affecting the entire system .

Fuse Boxes and Consumer Units: For smaller installations or residential equipment, traditional fuse boxes or consumer units may be used. These provide basic protection using fuses or miniature circuit breakers (MCBs) and are suitable for lower power loads .

Phase Configuration

In Burkina Faso, three-phase distribution boxes are typically used for industrial and commercial equipment due to higher power requirements, while single-phase boxes...
