

What type of metal optical cable is it

Overview

An armored optical cable is a special optical cable with a protective stainless steel armor tube wrapped around the fiber core. The metal armor layer effectively protects the fiber core from animal biting, moisture corrosion and various external damages. Multimode OM3/4/5), construction (Loose Tube vs. Tight Buffered), and application environment (Indoor/LSZH, Outdoor/ADSS, or Armored). Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can. Coaxial cable, or coax (pronounced / 'kɒs. æks /), is a type of electrical cable consisting of an inner conductor surrounded by a concentric conducting shield, with the two separated by a dielectric (insulating material); many coaxial cables also have a protective outer sheath or jacket.
