

Where is the fiber optic receiver box for the home

Article Overview

The fiber optic receiver box, or Optical Network Terminal (ONT), is usually installed inside or just outside your home, often near the electrical panel, in a garage, closet, or on an exterior wall.

Typical Locations

The ONT is generally placed in a central, accessible location to facilitate connections to your router and other devices. Common installation spots include:

- Near the electrical panel inside the home, where it can easily access power .
- In a garage or utility room, providing a convenient indoor location while keeping it out of sight .
- Inside a closet or other central area to minimize cable runs to your router .
- On an exterior wall if indoor installation is not feasible, often near where the fiber enters the home .

How It Connects

The ONT converts the fiber optic light signals into electrical signals that your router can use. It is connected to:

- The fiber line coming from the Network Interface Device (NID) or drop point outside your home
