

Which company makes the best material for cable tray elbows

Article Overview

Steel, particularly stainless steel or galvanized steel, is the most durable material for cable tray elbows, with top manufacturers including Legrand, Eaton, Atkore, Thomas & Betts, and Southwire.

Recommended Material

Steel Cable Trays: Steel is exceptionally strong and capable of handling heavy cable loads without bending or sagging, making it ideal for industrial and commercial applications. Variants include:

- **Stainless Steel:** Highly resistant to corrosion, suitable for humid, coastal, or chemically aggressive environments .
- **Galvanized Steel:** Coated with zinc to prevent rust, suitable for both indoor and outdoor use .
- **Low-Carbon Steel:** Strong at ambient temperatures but may require over-design in extremely low temperatures due to ductile-to-brittle transition . Aluminum is lightweight and corrosion-resistant but less strong under heavy loads, while plastic or fiberglass options are suitable only for light-duty or chemically aggressive environments .
