These types of laser diodes are commonly used for marking, engraving, healthcare, and data transmission. 3 Ready to find the perfect laser for your job?

Laser diodes offer high power for their size and produce electrical-power-efficient laser radiation. They consist of a p-n semiconductor junction, with a forward bias voltage applied to trigger a current through the junction. Wavelength matters too; shorter ones like 450nm engrave better while longer ones like 980nm cut thicker stuff.
