

Why is the red light on the router s fiber optic cable

Article Overview

A red light on your router's fiber optic cable usually indicates a Loss of Signal (LOS), meaning the router is not receiving a proper optical signal from your ISP.

What the Red LOS Light Means

The LOS (Loss of Signal) light on a fiber router or Optical Network Terminal (ONT) signals that the device cannot detect the optical signal from the fiber network. When this light is red or blinking, it typically means your internet connection is disrupted, either due to a physical issue with the fiber line, a service outage, or a router/ONT problem .

Common Causes

- **Fiber Cable Damage or Disconnection:** A cut, bend, or improperly connected fiber optic cable can prevent the signal from reaching your router .
- **Dirty or Faulty Connectors:** Dust or damage on SC/APC connectors can block the optical signal .
- **ISP Service Outage:** Maintenance or local network issues from your provider can cause the LOS light to turn red .
- **Router or ONT Malfunction:** Hardware issues or a device stuck after a power fluctuation may trigger the red light .
- **Power Issues:** Inconsistent power supply to the router or ONT can disrupt signal detection
