Use standardized sheet metal parts and fasteners like rivets, screws, or setting bolts that comply with DIN/IEC/ISO standards. Remove any sharp edges, burrs, or rough surfaces from ducts and mounting points to prevent insulation damage on wires (DIN EN IEC 60204-1) . Plastic rivets are recommended where possible, and all screwdrivers, including pneumatic or cordless types, should be calibrated for correct torque . Cable ducts and trays should be installed to organize wiring and prevent mechanical stress. Ensure that all devices on doors, such as pushbuttons or indicators, are aligned vertically and perpendicular for uniformity .

Electrical Wiring Practices

For wiring, follow these key guidelines:

- Wire selection: Use the correct wire gauge and insulation thickness according to NFPA 79 or local standards to handle the expected voltage and current safely .
- Connection methods: Modern terminals like WAGO Push-in CAGE CLAMP® allow fast, vibration-proof, and maintenance-free connections for solid and stranded conductors. Lever, push-button, or operating slot variants can be chosen depending...
