

Wiring from switch to distribution box

Article Overview

To wire a switch to a distribution box, connect the live (phase) wire from the switch to the main terminal of the distribution box, ensure proper neutral and earth connections, and route each circuit through the appropriate MCB or RCCB for protection.

Step-by-Step Wiring Process

1. Safety First Always turn off the main power supply before starting any wiring to prevent electric shock. Verify with a multimeter that no voltage is present at the connection points . 2. Mounting the Distribution Box Secure the distribution box at an accessible height on a wall, ensuring it is free from obstructions and moisture. Choose a box with the correct IP rating for your environment . 3. Connecting the Switch to the Distribution Box

- Identify the live (phase) wire from the switch (typically brown or red).
 - Connect this wire to the main terminal or input of the distribution box, usually feeding the main MCB or isolator .
 - Ensure the neutral wire from the switch circuit is connected to the neutral link inside the distribution box.
 - Connect the earth wire to the earth bar for grounding and safety .
4. Installing Protective Devices
- Place the main MCB (double-pole for single-phase systems) at the input to control the overall supply .
 - Connect RCCBs to protect against leakage currents and electric shocks.
 - Connect single-pole MCBs for individual circuits or loads, ensuring each outgoing...
