

Wiring of 4-way distribution box

Article Overview

A 4-way distribution box is wired by connecting the incoming power to the main breaker, distributing power to branch breakers, and properly terminating neutral and ground wires according to standard color codes and safety practices.

Components and Preparation

Before wiring, ensure you have the following:

- Circuit breakers: One main breaker and four branch breakers.
- Wires: Phase wires (A: yellow, B: green, C: red), neutral wire (blue), and ground wire (yellow/green striped) with appropriate gauge based on load (e.g., 2.5mm² for lighting and sockets, 4mm² for air conditioning) .
- Tools and accessories: Wiring ties, screwdrivers, and terminal blocks.
- Safety checks: Verify the box is properly mounted, dry, and accessible, with correct IP/NEMA rating for the environment .

Wiring Steps

- Incoming Power Connection: Connect the utility or generator supply to the main breaker. For single-phase 220V, use one phase, one neutral, and one ground. For three-phase 380V, connect all three phases, neutral (if required), and ground .
- Main Breaker to Branch Breakers: Use busbars or direct wiring to distribute power from the main breaker to each of the four branch breakers. Ensure the wiring is neat and follows a left-to-right or top-to-bottom logical sequence .
- Branch Circuit Connections: Connect each branch breaker to its respective load. For 220V circuits, use one phase, neutral, and ground. For three-phase loads, connect a...
